

# Make harvesting easy – leave it to the professionals!

National Harvesters offer professional, efficient solutions for all your harvesting needs. An experienced, SA based family-owned Australian company, National Harvesters offer their services to growers across all states.

Run by father and daughter team Ian and Hayley Mead, their aim is to make harvesting an easy and stress-free process, while also ensuring maximum efficiency and crop yield.

“We’ve been in the industry for more than 17 years, both growing and harvesting olives, so growers can rest assure we understand what you want in a harvesting service,” Hayley said.

“And combining that extensive industry knowledge with the latest technology means we can help you maximise your yield.”

## Technology = efficiency

National Harvesters have a range of equipment and harvesting systems designed to suit the varying needs of Australian growers and grove styles.

“No one machine or system can provide the best efficiency in every grove, so we tailor our service to each individual client and grove,” Hayley said.

“Our OMC shake and catch system can harvest up to 300 trees per hour, with the option of catching in bins or bulk capacity up to 10 tonnes, and is suitable for use on established trees of six years and older.

“Our Gregoire G133v straddle system is the perfect harvester for young trees, and also for super high density groves with varieties such as Arbequina, Arbosana, Koroneiki and FS17.”

## Harvesting ... and much more

National Harvesters’ services don’t just stop when the fruit is off the trees, Hayley said.

“We understand that olive growers differ in terms of how hands-on they are in their groves. While many are full-time and can deal with the harvested fruit themselves, others are looking for a wider range of assistance in handling the harvesting and processing of their fruit.

“So we offer growers a complete “harvest time” service, including:

- olive harvesting
- transporting harvested olives to the processor
- assistance in arranging processing
- oil sales, for those without the time or inclination to market their oil themselves.

“The service is flexible to meet each grower’s needs, and our

extensive industry knowledge means we can advise on the most practical and efficient solutions based on those needs and the physical attributes of the trees and grove.

“We also have a great team of friendly energetic employees and are flexible with working hours to ensure we get the job done at the optimal time.

“We’re here to make it easy for you, so call us to organise a free onsite consultation, pre-harvest check and a friendly chat about the season and your growing techniques.”
