FUNGICIDE

ACTIVE CONSTITUENTS: 200 g/L TEBUCONAZOLE  
 200 g/L FLUOPYRAM

**GROUP 3 | 7 FUNGICIDE**

For the control of various diseases in various fruit and vegetable crops, tree nuts and pyrethrum as specified in the DIRECTIONS FOR USE table

## DIRECTIONS FOR USE

### RESTRAINTS

- DO NOT** apply by aircraft, with the exception of bananas.
- DO NOT** apply if heavy rains or storms are forecast within 3 days.
- DO NOT** irrigate to the point of field runoff for at least 3 days after application.

### SPRAY DRIFT RESTRAINTS

Specific definitions for terms used in this section of the label can be found at [apvma.gov.au/spraydrift](http://apvma.gov.au/spraydrift).

**DO NOT** allow bystanders to come into contact with the spray cloud.

**DO NOT** apply in a manner that may cause an unacceptable impact to native vegetation, agricultural crops, landscaped gardens and aquaculture product, or cause contamination of plant or livestock commodities, outside the application site from spray drift. The buffer zones in the relevant buffer zone tables below provide guidance but may not be sufficient in all situations. Wherever possible, correctly use application equipment designed to reduce spray drift and apply when the wind direction is away from these sensitive areas.

**DO NOT** apply unless the wind speed is between 3 and 20 kilometres per hour at the application site during the time of application.

**DO NOT** apply if there are hazardous surface temperature inversion conditions present at the application site during the time of application. Surface temperature inversion conditions exist most evenings one to two hours before sunset and persist until one to two hours after sunrise.

### Boom sprayers

**DO NOT** apply by a boom sprayer unless the following requirements are met:

- Spray droplets not smaller than a medium spray droplet size category.
- Minimum distances between the application site and downwind sensitive areas (see 'Mandatory buffer zones' section of the following table titled 'Buffer zones for boom sprayers') are observed.

### Buffer zones for boom sprayers

Application rate	Boom height above the target canopy	Mandatory downwind buffer zones				
		Bystander areas	Natural aquatic areas	Pollinator areas	Vegetation areas	Livestock areas
Up to 625 mL/ha	0.5 m or lower	0 m	0 m	0 m	0 m	0 m
	1.0 m or lower	0 m	15 m	0 m	0 m	0 m
Up to 1000 mL/ha	0.5 m or lower	0 m	0 m	0 m	0 m	0 m
	1.0 m or lower	0 m	20 m	0 m	5 m	0 m

**Vertical sprayers**

**DO NOT** apply by a vertical sprayer unless the following requirements are met:

- Spray is not directed above the target canopy.
- The outside of the sprayer is turned off when turning at the end of rows and when spraying the outer row on each side of the application site.
- For dilute water rates up to the maximum listed for each type of canopy specified, minimum distances between the application site and downwind sensitive areas (see ‘Mandatory buffer zones’ section of the following table titled ‘Buffer zones for vertical sprayers’) are observed.

**Buffer zones for vertical sprayers**

Type of target canopy and dilute water rate	Mandatory downwind buffer zones				
	Bystander areas	Natural aquatic areas	Pollinator areas	Vegetation areas	Livestock areas
2 metres tall and shorter, up to 625 mL/ha	0 m	0 m	0 m	0 m	0 m
Taller than 2 metres (not fully-foliated), up to 1.25 L/ha	0 m	15 m	0 m	5 m	0 m
Taller than 2 metres (fully-foliated), up to 1.25 L/ha	0 m	10 m	0 m	0 m	0 m
Taller than 2 metres (not fully-foliated), up to 2.5 L/ha	0 m	20 m	0 m	15 m	0 m
Taller than 2 metres (fully-foliated), up to 2.5 L/ha	0 m	10 m	0 m	5 m	0 m

**DIRECTIONS FOR USE TABLE**

**Fruit crops**

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Bananas (Qld, NSW, WA & NT only)	Yellow Sigatoka, leaf speckle, cordana leaf spot	375 mL/ha (plus a high quality water miscible mineral crop oil at 3 to 5 L/ha)	1 day	<p>Luna Experience should be applied as part of a regular fungicide program, in alternation with fungicides from a different chemical mode of action group. Intervals between applications should be 14-21 days. Length of interval should be modified to suit locality, disease conditions, and leaf emergence growth rates.</p> <p><b>Apply a maximum of 4 applications of Luna Experience to any banana block in a 12-month period.</b></p> <p>Luna Experience should be diluted with sufficient water to ensure thorough coverage of all leaf surfaces (minimum 20 L/ha spray volume when applied by aircraft).</p> <p>Luna Experience should only be applied with a high quality water miscible mineral crop oil, at 3 to 5 L/ha. Select the oil rate based upon disease pressure, i.e. use a lower oil rate under low disease pressure, and higher oil rate under high disease pressure.</p> <p>For optimum disease control, maintain thorough de-leaving practices in accordance with industry guidelines, to reduce disease inoculum. Old leaves, leaves with advanced lesions, and infected parts of the leaf should be removed prior to the application of Luna Experience.</p> <p><b>Resistance Management</b> This use is subject to a CropLife resistance management strategy.</p>
Citrus	Black spot ( <i>Guignardia citricarpa</i> ), emperor brown spot ( <i>Alternaria alternata</i> ), and botrytis ( <i>Botrytis cinerea</i> )	50 mL/100 L	28 days	<p><b>Black spot and emperor brown spot</b> Apply as soon as crop development has reached susceptible stages for disease infections to occur from after flowering onwards.</p> <p>Apply Luna Experience in a preventative fungicide program, incorporating fungicides from different mode of action groups.</p> <p><b>Botrytis</b> Apply at key botrytis timings from after flowering as part of a botrytis control program.</p> <p><b>Apply a maximum of 1 application of Luna Experience per year in the same orchard. DO NOT apply in a spray volume greater than 5,000 L/ha (2.5 L Luna Experience/ha).</b></p> <p><b>Do not apply Luna Experience during flowering in citrus crops.</b></p>

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Grapevines	Powdery mildew, botrytis bunch rot	37.5 mL/100 L  For <b>Concentrate spraying</b> Refer to the <b>Mixing/ Application</b> section	-	<p><b>Powdery mildew:</b> As part of a preventative program, apply up to 2 applications from 4 leaves separated (E-L 11) using a 10-14 day spray interval. Ensure thorough coverage of all foliage.</p> <p><b>Botrytis bunch rot:</b> Apply as part of a preventative program. Critical flowering application timing for botrytis includes but is not limited to 10% and 80% capfall. Ensure thorough coverage.</p> <p><b>General</b> <b>DO NOT apply after berries reached pepper-corn size (4 mm) (E-L 29).</b></p> <p><b>Apply a maximum of 2 applications per season. DO NOT apply more than 0.5 L/ha of Luna Experience per application. DO NOT apply in a spray volume greater than 1,330 L/ha.</b></p> <p><b>Application of Luna Experience during excessive heat is not recommended as crop damage may occur.</b></p> <p>Apply by dilute or concentrate spraying equipment. Apply the same total amount of product to the target crop whether applying this product by dilute or concentrate spraying methods. For concentrate spraying, do not use at rates greater than two times the dilute spraying rate (i.e. at a concentration factor greater than 2X) – refer “<b>Application</b>” section in GENERAL INSTRUCTIONS.</p> <p><b>Resistance management</b> This use is subject to a CropLife resistance management strategy.</p>

## Luna Experience

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Custard apples, persimmons American	Anthracnose ( <i>Colletotrichum</i> spp.)	75 mL/100 L	3 days	Begin applications as soon as crop development has reached susceptible stages for disease infections to occur.
Passionfruit	Anthracnose ( <i>Colletotrichum</i> spp.), Septoria spot ( <i>Septoria passiflorae</i> ), brown spot ( <i>Alternaria passiflorae</i> )	75 mL/100 L	1 day	<p>Apply Luna Experience in a preventative fungicide program, incorporating fungicides from different mode of action groups. Intervals between fungicide applications generally should be 14-21 days, but should be modified for locality, disease conditions and weather conditions.</p> <p><b>Apply a maximum of 3 applications of Luna Experience (depending on the water volume required to spray to run-off) that would not exceed a total of 2.5 litres of Luna Experience per hectare in a 12-month period.</b></p> <p>Apply as a high volume spray at a water volume appropriate to the crop stage to ensure good coverage of all foliage, flowers and fruit.</p> <p><b>Resistance Management</b> Observe industry resistance management guidelines relevant to this use. These guidelines may recommend limits to the number of sprays, constraints regarding consecutive sprays, minimum spray intervals and no-spray periods for all fungicide activity groups.</p>
Olives	Anthracnose ( <i>Colletotrichum</i> spp.)	50 mL/100 L	14 days	<p>Begin applications as soon as crop development has reached susceptible stages for disease infections to occur.</p> <p>Apply Luna Experience in a preventative fungicide program, incorporating fungicides from different mode of action groups. Intervals between fungicide applications generally should be 14-21 days, but should be modified for locality, disease conditions and weather conditions.</p> <p><b>Apply a maximum of 2 or 3 applications of Luna Experience (depending on the water volume required to spray to run-off) that would not exceed a total of 2.5 L/ha of Luna Experience in a 12-month period.</b></p>

## Luna Experience

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Strawberries  (includes protected cropping production systems)	Grey mould ( <i>Botrytis cinerea</i> )	1 L/ha	1 day	<p>Apply Luna Experience prior to disease onset as part of a preventative program. Apply a follow-up application 7-14 days after this initial application. Ensure thorough coverage of all foliage.</p> <p>Luna Experience should be applied as part of an integrated disease control program that incorporates other measures such as crop rotation, planting resistant crop varieties and moisture management to reduce humidity and crop wetness in order to limit disease pressure.</p> <p><b>General</b> Apply a maximum of 2 applications of Luna Experience per year in the same paddock.</p> <p><b>Resistance Management</b> This use is subject to a CropLife resistance management strategy.</p>

### Pyrethrum

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Pyrethrum	Ray blight ( <i>Stagonosporopsis tanacetii</i> ), sclerotinia flower blight ( <i>Sclerotinia sclerotiorum</i> )	1 L/ha	-	<p>Apply Luna Experience prior to disease onset as part of a preventative program. Generally best results can be obtained where Luna Experience is applied at 10-30 % open flowers, but application is not limited to these timings. Apply a follow-up application 7-14 days after this initial application.</p> <p>Luna Experience should be applied as part of an integrated disease control program that incorporates other measures such as crop rotation, planting resistant crop varieties and moisture management to reduce humidity and crop wetness in order to limit disease pressure.</p> <p><b>General</b> Apply a maximum of 2 applications of Luna Experience per year in the same paddock.</p>

Tree nuts

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Almonds	Blossom blight, stone fruit rust, shot hole	37.5 mL/100 L  For <b>Concentrate spraying</b> Refer to the <b>Mixing/ Application</b> section	14 days	<p>Apply in a fungicide spray program according to target disease, observing the restrictions on total number of applications detailed below.</p> <p><b>Blossom blight:</b> Apply as part of a preventive blossom blight spray program. The critical application timings for blossom blight control are early (1-10%) blossom, full bloom and petal fall/shuck fall.</p> <p><b>Stone fruit rust:</b> Apply at or prior to the first signs of disease. Repeat applications may be required later in the crop cycle if weather conditions favour disease development or new foliage growth occurs.</p> <p><b>Shot hole:</b> Apply as part of a protectant spray program at intervals of 10-14 days starting at early pink bud. Repeat applications may be required later in the crop cycle if weather conditions favour disease development. Use the shorter spray intervals when disease pressure is high or plants are growing rapidly or weather conditions favour disease development.</p> <p><b>Hull rot:</b> Apply at early (1-10 %) hull split as a preventative treatment. Repeat at 50 % hull split if required. Apply to the point of run-off to give thorough coverage of nuts.</p> <p>A reduction in the percentage of nuts infected and a consequent reduction in nuts retained on the tree after harvest can be expected following applications as directed.</p> <p><b>General</b> <b>Apply a maximum of 3 applications to any almond block per season. DO NOT apply more than 1.25 L/ha of Luna Experience per application. DO NOT apply more than 2.5 L/ha of Luna Experience per season.</b></p> <p>Apply in sufficient water volume to ensure thorough coverage of target plant parts.</p> <p><b>Blossom blight, stone fruit rust, shot hole</b> Apply by dilute or concentrate spraying equipment (except for hull rot applications where concentrate application is not appropriate). Apply the same total amount of product to the target crop whether applying this product by dilute or concentrate spraying methods. For concentrate spraying, do not use at rates greater than two times the dilute spraying rate (i.e. at a concentration factor greater than 2X) – refer “<b>Application</b>” section in GENERAL INSTRUCTIONS.</p> <p><b>Resistance management</b> This use is subject to a CropLife Australia fungicide resistance management strategy.</p>
	Hull rot – <i>Suppression only</i>	50 mL/100 L  <b>Concentrate spraying is not recommended for this disease</b>		

## Luna Experience

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Macadamias	Husk spot	50-60 mL/ 100 L	-	<p>Luna Experience should be applied as part of a regular fungicide program, with fungicides from different chemical mode of action groups included in the spray program.</p> <p>DO NOT apply later than 14 days after early nut set.</p> <p><b>Husk spot:</b> Apply as part of a preventative husk spot spray program. Begin applications when young nuts reach match head size stage. Intervals between applications should be approximately 21-28 days, but modified for locality and disease conditions. Use the higher rate and shorter intervals when applied during conditions favourable to disease development. Luna Experience should be diluted with sufficient water to ensure thorough coverage of the entire tree canopy.</p> <p><b>Botrytis blight:</b> Apply as part of a preventative botrytis blight spray program. Begin applications at flower bloom, prior to disease development. Intervals between applications should be approximately 20-22 days, but modified for locality and disease conditions. Use a shorter interval when applied during conditions favourable to disease development. Luna Experience should be diluted with sufficient water to ensure thorough coverage of all fruiting parts of the trees.</p> <p><b>General</b> <b>Apply a maximum of 2 applications to any macadamia block in a 12-month period. DO NOT apply more than 1.25 L/ha of Luna Experience per application.</b></p> <p><b>Resistance management</b> This use is subject to a CropLife resistance management strategy.</p>
	Botrytis blight	50 mL/100 L		

## Luna Experience

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Pistachios	Botrytis blight	50 mL/100 L	Nil	<p>Luna Experience should be applied as part of a regular fungicide program, in alternation with fungicides from a different chemical mode of action group.</p> <p><b>Botrytis blight:</b> Apply as part of a preventative botrytis blight spray program. Begin applications at flower bloom, prior to disease development. Intervals between applications should be approximately 20-22 days, but modified for locality and disease conditions. Use the shorter interval when applied during conditions favourable to disease development. Luna Experience should be diluted with sufficient water to ensure thorough coverage of all fruiting parts of the trees.</p> <p><b>Botryosphaeria panicle and shoot blight:</b> Apply as part of a preventative botryosphaeria panicle and shoot blight spray program. Begin applications at full bloom prior to disease development. Intervals between applications should be approximately 21-28 days but modified for local disease conditions. Use the shorter spray interval when applied during conditions favourable to disease development. Luna Experience should be diluted with sufficient water to ensure thorough coverage of the entire tree canopy.</p> <p><b>Apply a maximum of 2 applications to any pistachio block in a 12-month period. DO NOT apply more than 1.25 L/ha of Luna Experience per application.</b></p>

### Vegetables

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Bulb vegetables, e.g. onions, spring onions, leek, shallots	White rot ( <i>Sclerotium cepivorum</i> ) <i>Suppression only</i>	1 L/ha	7 days	<p>Apply Luna Experience as a broadcast spray commencing when crop is at the 1 leaf stage. Applications should be followed up with an irrigation or rainfall sufficient to drench the treatment into the soil without allowing field runoff from the paddock. Apply a second application 21-28 days later. Use the shorter interval if conditions favour disease development.</p> <p>Luna Experience should be applied as part of an integrated disease control program that incorporates other measures such as crop rotation, planting resistant crop varieties and moisture management to reduce humidity and crop wetness in order to limit disease pressure.</p> <p><b>General</b> <b>Apply a maximum of 2 applications of Luna Experience per year in the same paddock.</b></p>

## Luna Experience

CROP	DISEASE	RATE	WHP	CRITICAL COMMENTS
Capsicums, tomatoes  (includes protected cropping production systems)	Powdery mildew ( <i>Leveillula taurica</i> )	250-500 mL/ha  OR  <b>Dilute spraying</b> 25-50 mL/100 L	1 day	<p>Apply Luna Experience prior to disease onset as part of a preventative program. A repeat application should be applied 7-14 days after this initial application. Ensure thorough coverage of the target crop.</p> <p>Luna Experience should be applied as part of an integrated disease control program that incorporates other measures such as crop rotation, planting resistant crop varieties and moisture management to reduce humidity and crop wetness in order to limit disease pressure.</p> <p>Dilute spraying is recommended for most trellised crops, particularly those grown in protected cropping systems. For dilute spraying apply to the point of run-off, using application volumes of up to 1000 L/ha – refer “Application” section in GENERAL INSTRUCTIONS.</p> <p><b>General</b>  <b>Apply a maximum of 3 applications of Luna Experience per year in the same paddock.</b></p> <p><b>Resistance Management</b>            This use is subject to a CropLife resistance management strategy.</p>
Cucurbits, e.g. cucumbers, rockmelons, zucchinis  (includes protected cropping production systems)	Powdery mildew <i>Podosphaera xanthii</i> (synonym = <i>Sphaerotheca fuliginea</i> ) <i>Golovinomyces cichoracearum</i> (synonym = <i>Erysiphe cichoracearum</i> )	500 mL/ha  OR  <b>Dilute spraying</b> 50 mL/100 L	1 day	<p>Apply Luna Experience prior to disease onset as part of a preventative program. A repeat application should be applied 7-14 days after this initial application. Ensure thorough coverage of the target crop.</p> <p>Luna Experience should be applied as part of an integrated disease control program that incorporates other measures such as crop rotation, planting resistant crop varieties and moisture management to reduce humidity and crop wetness in order to limit disease pressure.</p> <p>Dilute spraying is recommended for most trellised crops, particularly those grown in protected cropping systems. For dilute spraying apply to the point of run-off, using application volumes of up to 1000 L/ha – refer “Application” section in GENERAL INSTRUCTIONS.</p> <p><b>General</b>  <b>Apply a maximum of 3 applications of Luna Experience per year in the same paddock.</b></p> <p><b>Resistance Management</b>            This use is subject to a CropLife resistance management strategy.</p>
	Gummy stem blight ( <i>Didymella bryoniae</i> )	625 mL/ha  OR  <b>Dilute spraying</b> 62.5 mL/100 L		

**NOT TO BE USED FOR ANY PURPOSE OR IN ANY MANNER CONTRARY TO THIS LABEL UNLESS AUTHORISED UNDER APPROPRIATE LEGISLATION**

**WITHHOLDING PERIOD****Harvest (H):****Pistachios: Nil****Bananas, capsicums, cucurbits, passion fruit, strawberries, tomatoes: DO NOT HARVEST FOR 1 DAY AFTER APPLICATION****Custard apples, persimmon American: DO NOT HARVEST FOR 3 DAYS AFTER APPLICATION****Bulb vegetables: DO NOT HARVEST FOR 7 DAYS AFTER APPLICATION****Almonds, olives: DO NOT HARVEST FOR 14 DAYS AFTER APPLICATION****Citrus: DO NOT HARVEST FOR 28 DAYS AFTER APPLICATION****Grapes, macadamias: NOT REQUIRED WHEN USED AS DIRECTED****Note:** If grapes are likely to be exported as wine, fresh or dried fruit also refer to advice under **Export of treated produce** heading.**Grazing (G):****Grapes: DO NOT GRAZE LIVESTOCK IN TREATED VINEYARDS****Orchards: DO NOT GRAZE LIVESTOCK IN TREATED ORCHARDS****EXPORT OF TREATED PRODUCE**

Growers should note that suitable MRLs or import tolerances may not exist in all markets for produce treated with Luna Experience. In some situations export requirements may be met by limiting application number and/or imposing a longer withholding period than specified above. If you are growing produce for export, please check with Bayer Crop Science for the latest information on MRLs and import tolerances and for advice on any potential trade issues and their management.

*Grapes for wine intended for export:* Suitable MRLs or import tolerances are established in most, but not all, wine export destinations to allow use up until the stated withholding period for grapes. For the latest information consult with Bayer Crop Science, your winery or the Australian Wine Research Institute (AWRI) before using Luna Experience in grapes which may be used to make wine for export.

**EXPORT SLAUGHTER INTERVAL (ESI) – 30 DAYS****Livestock that has been grazed on or fed treated crops should be placed on clean feed for 30 days prior to slaughter.****GENERAL INSTRUCTIONS****Important (bananas)**

There are certain conditions when the surface of recently emerged fruit is particularly prone to marking damage from spray applications. In circumstances where application will be made to very rapidly growing fruit in hot conditions with strong direct light, it is recommended that all emerged bunches be bagged prior to spraying to minimise risk of fruit marking. Never include adjuvants other than water miscible oils with Luna Experience. The inclusion of wetting agents may cause phytotoxicity to young fruit.

**Mixing**

Shake well before use. Ensure contents are well mixed by shaking, rolling, pumping or other suitable means. Half fill the spray tank with clean water. Pour in the required quantity of Luna Experience, with agitators running. Then add the high quality, water miscible mineral crop oil (bananas only), followed by the remainder of the water and mix well. Use spray mixture immediately after preparation, do not allow it to stand.

**Adjuvants (citrus only)**

The addition of suitable adjuvants may enhance coverage. Use adjuvants at normal label rates. A suitable adjuvant, such as a non-ionic surfactant/wetting agent (e.g. Agral® 600) CAN be used when applying Luna Experience to citrus. Apply at normal label rates for each adjuvant (e.g. Agral at a rate of 0.01% v/v).

Do not use adjuvants or penetrants which may cause phytotoxicity to crops. Refer to Bayer Crop Science for further information.

**Application****Ground application**

Apply in sufficient water, using suitable application parameters (nozzles, pressure, speed, etc.) to ensure thorough and even coverage of the target area, as both are essential. Except when applying with orchard airblast equipment, use only MEDIUM spray droplet.

**Dilute spraying**

- Use a sprayer designed to apply high volumes of water up to the point of run-off and matched to the crop being sprayed.
- Set up and operate the sprayer to achieve even coverage throughout the crop canopy. Apply sufficient water to cover the crop to the point of run-off. Avoid excessive run-off.
- The required water volume may be determined by applying different test volumes, using different settings on the sprayer, from industry guidelines or expert advice.
- Add the amount of product specified in the Directions for Use table for each 100 L of water up to a maximum per hectare as indicated in the Direction for Use table in a single application. Spray to the point of run-off.
- The required dilute spray volume will change and the sprayer set up and operation may also need to be changed, as the crop grows.

**Concentrate spraying (almonds (excluding hull rot), grapes only)**

- Use a sprayer designed and set up for concentrate spraying (that is a sprayer which applies spray volumes less than those required to reach the point of run-off) and matched to the crop being sprayed.
- Set up and operate the sprayer to achieve even coverage throughout the crop canopy using your chosen spray volume.
- Determine an appropriate dilute spray volume (See *Dilute spraying* above) for the crop canopy. This is needed to calculate the concentrate mixing rate.
- The mixing rate for concentrate spraying can then be calculated in the following way:

**Example only**

1. Dilute spray volume as determined above: For example 1500 L/ha
  2. Your chosen concentrate spray volume: For example 750 L/ha
  3. The concentration factor in this example is 2X (i.e.  $1500\text{ L} \div 750\text{ L} = 2$ )
  4. If the dilute label rate is 37.5 mL/100 L, then the concentrate rate becomes  $2 \times 37.5$ , which is 75 mL/100 L of concentrate spray.
- The chosen spray volume, amount of product per 100 L of water, and the sprayer set up and operation may need to be changed as the crop grows.
  - Do not use at a concentration factor greater than 2X (e.g. at a rate higher than 75 mL/100 L where a dilute spraying rate of 37.5 mL/100 L is specified).
  - For further information on concentrate spraying, users are advised to consult relevant industry guidelines, undertake appropriate competency training and follow industry best practice.

**Aerial application (bananas only)**

Apply at least 20 L of spray mixture per hectare for aerial application. Use suitable application parameters (nozzles, pressure, speed, etc.) to deliver only a MEDIUM spray droplet size.

**Sprayer clean up**

Clean up spray equipment by rinsing all application, pumping and mixing equipment twice with clean water after use.

**Plant back interval requirements for rotational crops**

The following plant back intervals are required for rotational crops:

Crop group	Plant back interval
Vegetables	None
Cereals, pulses, oil seed crops and pasture	7 months

**FUNGICIDE RESISTANCE WARNING**

<b>GROUP</b>	<b>3</b>	<b>7</b>	<b>FUNGICIDE</b>
--------------	----------	----------	------------------

Luna Experience Fungicide is a member of the succinate dehydrogenase inhibitor (SDHI) and DMI group of fungicides. For fungicide resistance management Luna Experience is a Group 3 and a Group 7 fungicide. Some naturally occurring individual fungi resistant to Luna Experience and other Group 3 and Group 7 fungicides may exist through normal genetic variability in any fungal population. The resistant individuals can eventually dominate the fungal population if these fungicides are used repeatedly. These resistant fungi will not be controlled by Luna Experience and other Group 3 and Group 7 fungicides, thus resulting in a reduction in efficacy and possible yield loss. Since the occurrence of resistant fungi is difficult to detect prior to use, Bayer CropScience Pty Ltd accepts no liability for any losses that may result from the failure of Luna Experience to control resistant fungi.

Luna Experience may be subject to specific resistance management strategies. For further information contact your local supplier, Bayer Crop Science representative, local agricultural department agronomist or refer to the CropLife Australia website.

### COMPATIBILITY

For information on the compatibility of Luna Experience with other products, contact your local retailer or Bayer Crop Science representative.

### PRECAUTION

#### Re-entry / Re-handling statement

DO NOT enter treated areas until spray has dried. If prior entry is necessary wear cotton overalls buttoned to the neck and wrist (or equivalent clothing) and chemical resistant gloves. Clothing must be laundered after each day's use.

### PROTECTION OF WILDLIFE, FISH, CRUSTACEANS AND ENVIRONMENT

Toxic to aquatic life. DO NOT contaminate wetlands or watercourses with this product or used containers.

### STORAGE AND DISPOSAL

Store in the closed, original container in a cool, well-ventilated area. Do not store for prolonged periods in direct sunlight.

Triple-rinse container before disposal. Add rinsings to spray tank. Do not dispose of undiluted chemicals on site. If recycling, replace cap and return clean containers to recycler or designated collection point. If not recycling break, crush or puncture and deliver empty container to an approved waste management facility. If an approved facility is not available, bury the empty container 500 mm below the surface in a disposal pit specifically marked and set up for this purpose, clear of waterways, desirable vegetation and tree roots, in compliance with relevant Local, State or Territory government regulations. Do not burn empty containers or product. Do not re-use empty container for any other purpose.

### SAFETY DIRECTIONS

Will irritate the eyes. Avoid contact with eyes. When opening the container and preparing spray wear cotton overalls buttoned to the neck and wrist (or equivalent clothing), face shield or goggles and elbow-length chemical resistant gloves. When using the prepared spray wear cotton overalls buttoned to the neck and wrist (or equivalent clothing). If product in eyes, wash it out immediately with water. Wash hands after use. After each day's use, wash gloves, face shield or goggles and contaminated clothing.

### FIRST AID

If poisoning occurs, contact a doctor or Poisons Information Centre. Phone Australia 13 11 26.

### SAFETY DATA SHEET

Additional information is listed in the Safety Data Sheet, which can be obtained from [www.crop.bayer.com.au](http://www.crop.bayer.com.au).

### EXCLUSION OF LIABILITY

This product must be used strictly as directed, and in accordance with all instructions appearing on the label and in other reference material. So far as it is lawfully able to do so, Bayer CropScience Pty Ltd accepts no liability or responsibility for loss or damage arising from failure to follow such directions and instructions.

Luna® is a Registered Trademark of the Bayer Group.

APVMA Approval No.: 87841/132425
